

Industry expertise Wood by Création Durable

Création Durable offers individually customized solutions in the areas of corporate development, engineering and marketing for the wood industry. We support you in wood processing, in particular in the production of wood-based panels, for plywood and veneer, laminated wood, sawmill and solid wood products, EWP's, in timber and prefabricated house construction, but also for Biomass and energy projects.

We create financing models and cost accounting, develop approaches for supply chain management, Innovation management, human resources, quality assurance, safety and environmental management. We also support you in due diligence projects and feasibility studies.

Création Durable develops marketing strategies for wood products, supports you in product development from the first laboratory tests through to technical approvals, and provides you with market and sales studies to help you develop your own products to facilitate decision making in the area of product range. In addition, we offer training courses on technology and product as well as on sales topics.
